

I.R.S.

Interview Recording System

*I.B.T. Video Systems designed the Interview Recording System to easily document the audio and visual details of an interview in high speed recording. Applications range from **investigative interviews** such as witness, criminal, insurance or workman's compensation statements to assisting **human resources** to document harassment complaints, terminating an employee and pre-employment interviews. The event is recorded, documented and filed for future reference.*

*One of the key advantages of utilizing the Interview Recording System is the ability to **prove or dispute misconduct or allegations** by reviewing the video and audio recording of the event in question. The recording provides compelling evidence and captures details that may have been overlooked during the interview.*
