

Overview of IBT Video Systems SchoolGuard Pro System

Recent events such as Columbine, September 11th and Virginia Tech have changed the way we as a society need to look at securing our schools, responding to emergency situations and providing the best possible protection for the children of our communities. Society now realizes that tragedy can strike any school at any given time, regardless of its location. Taking steps to prevent and to better respond in emergency situations is in our opinion the duty of every school board member, administrator, parent and citizen.

IBT Video Systems, Inc. is committed to the safety of universities and schools across the country. Our goal is to provide solutions to improve the safety and security of students and teachers meanwhile allowing local Police and Fire Departments to improve response and be better prepared in emergencies.

Our Safe School Initiative:

- *Design and install a video system that is **relevant** to the schools needs and budget.*
- *Install emergency panic buttons in several key locations that when activated notifies the Police/Fire dispatch center and begins sending live video automatically. This allows the Police/Fire Dept. to assess the situation inside of the school while responding to the scene.*
- *Provide your local Police/Fire dispatch center with **FREE receiving equipment** in order to view your system in the event of an emergency.*
- *Work with your school on preparing specific policy and procedures of how and when the local authorities have access to your video system.*
- *Provide free training and support to your local Police/Fire Department.*
- *Guarantee that you will receive the **lowest cost** on the video system and cameras, which allows you to invest in other areas of security or increase the amount of protection/cameras in your facility.*
